

Cloud Desktops

Spot PC is a managed, secured and continuously optimized cloud desktops solution that runs on Azure Virtual Desktop (AVD) and Windows 365 Cloud PC. It is easy to deploy and offered at a competitive fixed price, per-user, on a month-to-month agreement.

Key features

Fixed fee and month-to-month

Spot PC is sold on a fixed costs per user basis. Not only is our price to the MSP fixed, it is also aggressively competitive. MSPs don't need to audit complex monthly cloud invoices. NetApp absorbs variable costs allowing MSPs to know exactly what their costs and margins will be month after month.

Enhanced security and protection

Microsoft Defender for Cloud is, by default, enabled for all AVD session VMs. The Spot PC console reports security alerts and recommendations for both AVD and Windows 365 desktops. It automatically backs up the user data volume for seven years.

Co-managed desktops

Spot PC delivers native cloud desktops based on AVD and Windows 365 Cloud PC, utilizing AI-driven automation and optimization from Spot by NetApp for cost-optimized virtual desktops that perform like a local device.

Rapid deployment and migration assistance

Spot PC onboarding experts assist with application and data migration challenges, while Spot PC automated deployment workflow reduces the time to deliver value for clients.

Powerful console with rich real-time analytic dashboards

Complete single-pane-of-glass visibility to user sessions and session VM performance metrics, along with remediation and access tools to make user support faster and more efficient.

Unified cross-tenant management

A global view of all accounts, resources and users under your control with secure drill down into any tenant to immediately troubleshoot, diagnose and resolve identified issues.

Universal benefits

Let our experts manage your cloud desktops so you can focus on your business.

Benefits of Spot PC include:

No more operational burdens

With cloud desktops managed by our EUC experts, your IT resources can focus on making end users happy and helping your MSP business grow.

Deliver more cloud desktops at less cost

Utilizing Spot by NetApp optimization and automation technologies, Spot PC maximizes performance and minimizes costs.

Realize predictable profit margins

Spot PC's fixed per-user-per-month subscription enables MSPs to predict and budget exactly what their expected gross margins will be.

End worries about application management

Spot PC ensures user applications continue to run smoothly without any disruption during any time of the lifecycle management of the desktops.

Optimized for performance

Using Spot Elastigroup technology, Spot PC dynamically optimizes the desktop performance for different types of applications.

Address any use case

Whether affordable pooled users for office productivity, dedicated personal VMs for advanced users, or GPU-enabled users for intensive workloads, Spot PC can support all use cases.

Security at the center

Spot PC is built on the bullet-proof security of Microsoft Azure, providing layers matching the right level of security for different types of users and job functions.

Real-time observability

Cross-tenant visibility with real-time metrics on session server health and user session performance reduces support burdens and decreases time to resolution.

Specialized support included

Spot PC is supported by a team of expert cloud engineers and cloud virtual desktop specialists with a history of proactive solution consulting services.
